

## 4LU4 Small Group Discussion 1

### Case 1: Eye Redness

A 12-year-old male complains of redness of both eyes, left more than the right.

1. What else will you ask for in the patient's history?
2. Describe.

Right

Left

3. What else will you check in the physical examination?
4. What are your differential diagnoses? Narrow them down to a working impression.
5. Discuss the etiology behind your working impression, and its clinical features. How would you manage this patient?

## Case 2: Ocular Emergency

A 29/M consulted in the ER. He says battery fluid hit his right eye a few hours ago.

6. What should you do when the patient comes to the ER?
7. What will you ask in the history?
8. Describe the right eye

9. What else will you check in the physical exam?
10. What is your primary working impression?
11. What structures of the eye can be affected?
12. How will you manage the patient?
