

## LU4 Small Group Discussion

### Case 3: Eye Deviation

The patient is a 6-year-old boy. His mother says he has been cross-eyed since 3 years of age.

#1: What else will you ask for in the patient's history?

On PE, the Visual Acuity is

OD: 20/70 → 20/40 on pinhole

OS: 20/20

Pupils equally reactive to light, (-) RAPD

# 2: Describe

#3: Describe.

All other cardinal gazes are normal. There is no nystagmus.

#4: What else will you check in the physical exam?

#5: What conditions can make a child appear cross-eyed? How can you confirm if this is the case for this patient?

#6: Summarize the conditions found in your patient

#7: How can we manage our patient?
