

**SIMULATED PATIENT ACTIVITY AND ASSIGNMENT GUIDE FOR STUDENTS**  
**OS 216: Human Disease and Treatment - Hematopoiesis and the Immune Response**  
**Hematology Module**

**Task:**

For this activity you will be tasked to manage a patient with a hematologic disorder through a paper case simulation.

**Process:**

1. Access Simulated Patient link thru UVLE
2. You will be presented a case scenario.
3. After reading the initial case scenario you will be asked a question and presented with a finite set of options.
4. Depending on your chosen answer you will be directed to a pre-specified set of additional case details.
5. This will keep on repeating until you get to the patient outcome.

**Evaluation:**

Scoring will be set on the ending and points collected through the choices made along the case. A student may have 3 tries for the simulation. Highest score will be recorded for summative evaluation.
