

DEPARTMENT OF ANESTHESIOLOGY College of Medicine and Philippine General Hospital University of the Philippines Manila

ANESTH 251: INTEGRATED CLINICAL CLERKSHIP II <u>Practical Exam (Intubation for General Anesthesia)</u>

Checked the patient's chart Verified patient's identity and consent Checked the patient's weight, if stated in the chart Checked pre-medication, if applicable Introduced self to patient Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients	esiologists's	s Name & Signa		
Pre-Induction Checked the patient's chart Verified patient's identity and consent Checked the patient's weight, if stated in the chart Checked pre-medication, if applicable Introduced self to patient Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients	esiologists's	s Name & Signai		
Checked the patient's identity and consent Checked the patient's weight, if stated in the chart Checked pre-medication, if applicable Introduced self to patient Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients		thesiologists's Name & Signature		
Checked the patient's identity and consent Checked the patient's weight, if stated in the chart Checked pre-medication, if applicable Introduced self to patient Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients				
Verified patient's identity and consent Checked the patient's weight, if stated in the chart Checked pre-medication, if applicable Introduced self to patient Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients	Done	Not Done	Remarks	
Checked the patient's weight, if stated in the chart Checked pre-medication, if applicable Introduced self to patient Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients				
Checked pre-medication, if applicable Introduced self to patient Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients				
Introduced self to patient Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Checked if anesthesia machine is in proper working order Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Checked suction Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Checked patency of patient's IV lines Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Checked airway equipment Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Checked that laryngoscope is in proper working order Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Prepared tape to secure the ET tube and inflator for the ET tube cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
cuff Attached monitors (as applicable) to the patient and verified that these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
these are functional Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Checked drugs Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Supplemental drugs, e.g. sedatives, opioids (as applicable) Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Induction agents Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Muscle relaxants Inhalational agents Emergency drugs Applied restraints to the patients Induction				
Emergency drugs Applied restraints to the patients Induction				
Emergency drugs Applied restraints to the patients Induction				
Applied restraints to the patients Induction				
Induction				
	Done	Not Done	Remarks	
Preoxygenated patient with 100% oxygen				
Administered drug in proper sequence				
Did proper mask ventilation				
Positioned patient properly for laryngoscopy		1		
Inserted laryngoscope smoothly using left hand				
Swept tongue to the left and repositioned patient as appropriate to				
visualize vocal cords				
Inserted endotracheal tube smoothly using the right hand				
Auscultated chest for the presence of equal breath sounds and				
verified correct tube placement				
Secured ET tube				
Secured E1 tube				
Post-Induction	Done	Not Done	Remarks	
Protected eyes and padded pressure points, as applicable	-			
Adjusted volatile anesthetic and oxygen settings				
Monitored patient's vital parameters post-induction
